

The Solar Eclipse will happen on Monday, April 8, 2024.

The Solar Eclipse is a special event where the Moon passes between the Earth and the Sun, which casts a shadow over the Earth for a little while.

There are different ways to see the eclipse safely. I will listen to instructions from the grown up who is with me.

During the eclipse, my eyes cannot look at the sky directly. It is not safe.

If I want to go outside to see the Solar Eclipse, I will need special glasses to keep my eyes safe.

I will ask a grown-up for help getting and using the special glasses.

I will make sure the special glasses cover my eyes completely.

If I don't want to be outside or wear glasses, I will let an adult know.

A grownup will let me know when it is safe to remove the special glasses.

If I protect my eyes with special eyeglasses, I will be safe and have fun watching the Solar Eclipse.
